📍 JFL110

I have been developing my coding skills ever since my first website at age eleven. I take pride in writing clean, well-tested code and love taking on a challenge through design to implementation. I enjoy training others and am known for having the knowledge, approachability and practical attitude to help everyone get the job done.

More details and examples of recent work can be found on my online CV.

Development experience

Freelance

Feb 2020 - present

Developing an educational product to produce custom worksheets and track progress for STEM subjects.

Designed a cloud-hosted microservice infrastructure to manage users and content that communicates with a React front end. Includes a cost-optimised NoSQL schema and OAuth security.

Created a user-friendly DSL for future developers to add content, in addition to a CI pipeline and integration tests.

ALFA Systems, London

Feb 2016 - Jan 19

Software Consultant

Developed, maintained and provided support for a Java-based asset-management software used by lenders across the globe.

Specialised in Data Warehousing with a focus on concurrency, performance and stability. Improved the speed of a several-billion-record Extract Transform Load process from eight hours to less than three, using a combination of schema redesign, SQL query optimisation and Java transformation optimisations. Quickly became an authority in the area and took ownership of key developments in an agile environment.

Conceived and built a number of tools to aid developers and support teams.

Assisted international clients on-site with SQL report writing.

Oversaw proposed changes to the application's database schema, ensuring conventions were adhered to and performance issues avoided.

Supervised and guided the development of junior team members.

Delivered regular training sessions to experienced colleagues and new hires on Java, SQL and internal frameworks.

Anderson Group, Luton

Dec 2015 - Feb 16

Software Developer

Took on an interim position after volunteering abroad. Developed in-house workflow systems using C# and MVC patterns.

Education

Imperial College London

2010 - 14

MEng. Chemical Engineering

Managed several team projects and brought software skills to the course, running training sessions on LaTeX markup-language and Autodesk 3D modelling software.

Led the restoration of a classic Mini as Car Officer of the Imperial CGCU Motor Club.

Knights Templar School

A-Levels: Maths A*, Economics A*, Chemistry A

AS-Levels: Further Maths A

GCSEs: Ten A*s

Other experience

Building a motorhome and travelling

Jan 2019 - Feb 20

Converted a pickup truck to a 4x4 motorhome by designing and building a fibreglass body completely from scratch.

El Ministerio de Educación, Colombia

Dec 2014 - Dec 15

Full-Time Volunteer English Teacher

Taught classes of up to forty state-school teenagers as well as improving teachers' English and course materials.

Completed a Cambridge CELTA English teaching course in preparation.

Created an educational Android App to utilise previously unused tablets in the classroom using a C# content server over a local network.

Back end

Java AWS Oracle + MySQL NoSQL
Hibernate JDBC Spring Guice
JUnit Gradle C# REST

Practices

TDD Integration testing
Continuous deployment
Agile Training

Front end

Javascript HTML5
S/CSS React + Redux
Pagespeed optimisation

Hobbies

✂ Car mechanics, robotics, inventing
⚠ Hiking, camping running
